023-11-29-12212

13. The Miller-Rabin is one test of determining if a number is of this type, the opposite of composite. For 10 points each:

[10] Name this type of number whose only factors are one and itself.

ANSWER: **prime** numbers

[10] A project known as GIMPS searches for these prime numbers of the form  $2^p - 1$ . Seven and 31 are examples.

ANSWER: **Mersenne** prime

[10] Two numbers are given this term if they have no common factor besides one. Eight and 15 are examples even though neither one are prime.

ANSWER: **co-prime**

064-11-29-12213

14. This proteins two states are called g and f. For 10 points each:

[10] Name this protein that makes up microfilaments.

ANSWER: **actin**

[10] Microfilaments and microtubules are two major components of this component that gives structure, shape, and organization to the cell.

ANSWER: **cytoskeleton**

[10] This protein is as an indicator of some cardiac problems. The c form binds calcium which then releases a similarly named protein, allowing myosin to bind the microfilament.

ANSWER: **troponin**

001-11-29-12214

15. This band asked “How can I convince you what you see is real” on “The Search is Over,” which joined “High on You” and “First Night” on their 1985 album *Vital Signs*. For 10 points each:
